

Enhance Your View

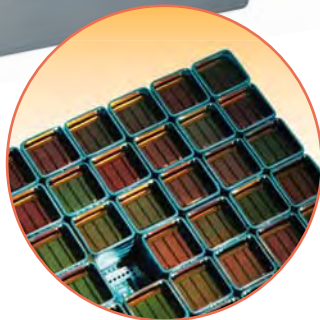

The Dilon 6800® Gamma Camera with Enhancements

Optimized for Breast-Specific Gamma Imaging (BSGI)

Now enhanced with Dilon's innovative "Core" Technology...
a revolutionary new way to build a better gamma camera.

Design advantages for breast imaging

- Dilon's patented SmartShield™ is the only compression paddle in the industry which improves lesion detection and eliminates shine through
- Compatible with the Dilon Slant15™ collimator for optimal viewing near the chest wall
- Located in the breast center for same day diagnosis
- Built with external USB port for easy extraction
- High-resolution compact detector

Dilon's compact detector houses Dilon's "Core" Technology. The Core powers superior detection of sub-centimeter lesions.

Enhanced and Optimized for Superior Imaging

Optimized for breast imaging, the Dilon 6800® is ideal for Breast-Specific Gamma Imaging (BSGI), a molecular imaging technique proven to be an effective tool to aid in the early detection of breast cancer and differentiation of benign and malignant tissue. The system is also capable of multiple nuclear medicine applications.

Thyroid

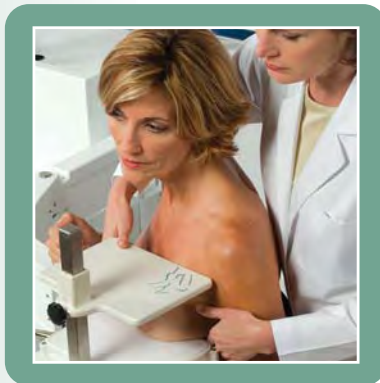

Hand

Breast

- Fully transportable allowing use between multiple areas of a hospital or imaging center
- Expanded nuclear medicine applications such as lymphoscintigraphy, thyroid, parathyroid, hepatobiliary, spot bone and pediatric imaging

Cranial-Caudal View

Lateral Medial View

Mimics all mammographic views providing data in images that directly correlate to the mammogram.
